

# FIRE PROTECTION SYSTEMS FOR SPECIAL APPLICATIONS

Dafo Vehicle supplies fire detection and suppression systems for several special applications. For example many business operations rely on emergency generators to secure critical functions within their organization. It is easy to ignore the fact that, as these units are driven by combustible engines, they also constitute a significant fire hazard. Due to years of experience in fire protection, we can see solutions where others fail. Our extensive product portfolio combined with our market knowledge can provide non-standard solutions worldwide either by ourselves or in cooperation with other contractors.

Dafo has been in business for over 100 years and has always been in the front line of technology. The overall objective of Dafo has always been to work with continuous improvements, research, and developments to make our systems more reliable, sustainable and innovative.

## DAFO VEHICLE FIRE SUPPRESSION SYSTEMS

A tested and certified fire suppression system in combination with efficient fire detection is the best first line of defence in case of an emergency. The Dafo Vehicle fire suppression system, equipped with a linear heat detector wire, responds immediately to any increase in temperature. Its fully automatic system detects and quickly extinguishes the fire. The suppression agent is released through a pipe system with specially designed nozzles that effectively cover the protected areas. Upon request manual release of the system can be provided.

## FORREX EVO - MAKES THE DIFFERENCE

The basis of Dafo Vehicle's system is the suppression agent Forrex EVO which is 100% flourine free and specially developed to suppress fires in combustibile engines. Forrex EVO is highly effective on flammable liquid fires like petrol, diesel and hydraulic oils. The system combines the features of liquid and dry chemical, includes unique and propriety tailormade solutions and offers outstanding flame knockdown and unique protection against re-ignition as it will cool down the overheated engine parts in case of a thermal event.

## OCCUPATION SAFETY AND HEALTH (OSH)

The harmless extinguishing liquid and normally non-pressurized containers presents no health risk to operators or staff.

## FUNCTION

Fire is indicated by a linear heat detector wire (1) that sends a signal to the actuator (2) which punctures the burst disc of the propellant gas cartridge (3) and releases nitrogen to the agent container (4) that distributes the Forrex EVO agent liquid to the nozzles (5) through the pipe system (8). At the same time the alarm system is activated, an alarm horn (6) in the vehicle and a light signal in the panel will warn the driver (7).

## STANDARDS & CERTIFICATES

Standards and regulations are a central part of our business operation and cover most of our products and system designs.

Dafo Vehicle honors and fulfills all valid standards and regulations in the markets where we operate. We are constantly working to obtain all relevant certifications where it is applicable.

SBF 127 and AS 5062 are some of the certificates that we hold.

## BENEFITS

- Strong cooling effect
- Effective Flame Knockdown
- Film forming effect to prevent re-ignition
- Non-pressurized container
- High penetration capability
- Freeze protected down to  $-50^{\circ}\text{C}$
- Easy maintenance
- Easy to clean up after discharge
- Independent system
- Non-corrosive

## HEXA+

Hexa + is a methodology used when Dafo Vehicle collaborates with customers around the world to ensure that people, vehicles and businesses are not harmed by fire.
