

Introducing **Arvak**, the next step in fire safety technology from Dafo Vehicle Fire Protection

Arvak is a cost-effective, stand-alone safety device designed to provide early fire detection and advanced protection for high-risk areas. With its fast installation process and robust design, it ensures reliable performance without the need for annual servicing if used as a stand-alone system.

Key Features:

Early Detection: Arvak enhances the operator's ability to identify fire risks early, providing an additional layer of safety.

Easy Installation: Arvak is quick to install, minimizing downtime and ensuring immediate protection.

Advanced Diagnostics: Embedded with advanced diagnostics and indication technology for real-time status updates.

False Alarm Prevention: Built with features that significantly reduce false alarms or false releases.

Integration Capabilities: Arvak can be used as a stand-alone device or seamlessly integrated into a fire suppression system.

Robust Detection Solution: A linear heat detection system with a terminating resistor ensures continuous monitoring, detecting wire interruptions or low-temperature shorts.

Multiple Outputs: Three outputs for alarm and fault indications ensure clear communication of system status.

High Durability: Engineered to withstand harsh environments with IP 67 protection, electromagnetic immunity, and reverse polarity/overvoltage peak protection.

Designed for ease of use and reliability, Arvak is perfect for mounting close to high-risk fire areas, allowing for regular checks and improved safety assurance.

Ensure **maximum safety** and **minimize risks** with **Arvak**, the advanced detection solution that offers peace of mind for your vehicles and operations.
